

# WORLD SCIENTISTS' WARNING TO HUMANITY

**INTRODUCTION** Human beings and the natural world are on a collision course. Human activities inflict harsh and often irreversible damage on the environment and on critical resources. If not checked, many of our current practices put at serious risk the future that we wish for human society and the plant and animal kingdoms, and may so alter the living world that it will be unable to sustain life in the manner that we know. Fundamental changes are urgent if we are to avoid the collision our present course will bring about.

**THE ENVIRONMENT** The environment is suffering critical stress:

**The Atmosphere** Stratospheric ozone depletion threatens us with enhanced ultraviolet radiation at the earth's surface, which can be damaging or lethal to many life forms. Air pollution near ground level, and acid precipitation, are already causing widespread injury to humans, forests, and crops.

**Water Resources** Heedless exploitation of depletable groundwater supplies endangers food production and other essential human systems. Heavy demands on the world's surface waters have resulted in serious shortages in some 80 countries, containing 40 percent of the world's population. Pollution of rivers, lakes, and groundwater further limits the supply.

**Oceans** Destructive pressure on the oceans is severe, particularly in the coastal regions which produce most of the world's food fish. The total marine catch is now at or above the estimated maximum sustainable yield. Some fisheries have already shown signs of collapse. Rivers carrying heavy burdens of eroded soil into the seas also carry industrial, municipal, agricultural, and livestock waste—some of it toxic.

**Soil** Loss of soil productivity, which is causing extensive land abandonment, is a widespread by-product of current practices in agriculture and animal husbandry. Since 1945, 11 percent of the earth's vegetated surface has been degraded—an area larger than India and China combined—and per capita food production in many parts of the world is decreasing.

**Forests** Tropical rain forests, as well as tropical and temperate dry forests, are being destroyed rapidly. At present rates, some critical forest types will be gone in a few years, and most of the tropical rain forest will be gone before the end of the next century. With them will go large numbers of plant and animal species.

**Living Species** The irreversible loss of species, which by 2100 may reach one-third of all species now living, is especially serious. We are losing the potential they hold for providing medicinal and other benefits, and the contribution that genetic diversity of life forms gives to the robustness of the world's biological systems and to the astonishing beauty of the earth itself.

Much of this damage is irreversible on a scale of centuries, or permanent. Other processes appear to pose additional threats. Increasing levels of gases in the atmosphere from human activities, including carbon dioxide released from fossil fuel burning and from deforestation, may alter climate on a global scale. Predictions of global warming are still uncertain—with projected effects ranging from tolerable to very severe—but the potential risks are very great.

Our massive tampering with the world's interdependent web of life—coupled with the environmental damage inflicted by deforestation, species loss, and climate change—could trigger widespread adverse effects, including unpredictable collapses of critical biological systems whose interactions and dynamics we only imperfectly understand.

Uncertainty over the extent of these effects cannot excuse complacency or delay in facing the threats.

**POPULATION** The earth is finite. Its ability to absorb wastes and destructive effluent is finite. Its ability to provide food and energy is finite. Its ability to provide for growing numbers of people is finite. And we are fast approaching many of the earth's limits. Current economic practices which damage the environment, in both developed and underdeveloped nations, cannot be continued without the risk that vital global systems will be damaged beyond repair.

Pressures resulting from unrestrained population growth put demands on the natural world that can overwhelm any efforts to achieve a sustainable future. If we are to halt the destruction of our environment, we must accept limits to that growth. A World Bank estimate indicates that world population will not stabilize at less than 12.4 billion, while the United Nations concludes that the eventual total could reach 14 billion, a near tripling of today's 5.4 billion. But, even at this moment, one

person in five lives in absolute poverty without enough to eat, and one in ten suffers serious malnutrition.

No more than one or a few decades remain before the chance to avert the threats we now confront will be lost and the prospects for humanity immeasurably diminished.

**WARNING** We the undersigned, senior members of the world's scientific community, hereby warn all humanity of what lies ahead. A great change in our stewardship of the earth and the life on it is required, if vast human misery is to be avoided and our global home on this planet is not to be irretrievably mutilated.

**WHAT WE MUST DO** Five inextricably linked areas must be addressed simultaneously:

**1. We must bring environmentally damaging activities under control to restore and protect the integrity of the earth's systems we depend on.** We must, for example, move away from fossil fuels to more benign, inexhaustible energy sources to cut greenhouse-gas emissions and the pollution of our air and water. Priority must be given to the development of energy sources matched to Third World needs—small-scale and relatively easy to implement.

We must halt deforestation, injury to and loss of agricultural land, and the loss of terrestrial and marine plant and animal species.

**2. We must manage resources crucial to human welfare more effectively.** We must give high priority to efficient use of energy, water, and other materials, including expansion of conservation and recycling.

**3. We must stabilize population. This will be possible only if all nations recognize that it requires improved social and economic conditions, and the adoption of effective, voluntary family planning.**

**4. We must reduce and eventually eliminate poverty.**

**5. We must ensure sexual equality, and guarantee women control over their own reproductive decisions.**

The developed nations are the largest polluters in the world today. They must greatly reduce their overconsumption, if we are to reduce pressures on resources and the global environment. The developed nations have the obligation to provide aid and support to developing nations, because only the developed nations have the financial resources and the technical skills for these tasks.

Acting on this recognition is not altruism, but enlightened self-interest: whether industrialized or not, we all have but one lifeboat. No nation can escape from injury when global biological systems are damaged. No nation can escape from conflicts over increasingly scarce resources. In addition, environmental and economic instabilities will cause mass migrations with incalculable consequences for developed and undeveloped nations alike.

Developing nations must realize that environmental damage is one of the gravest threats they face, and that attempts to blunt it will be overwhelmed if their populations go unchecked. The greatest peril is to become trapped in spirals of environmental decline, poverty, and unrest, leading to social, economic, and environmental collapse.

Success in this global endeavor will require a great reduction in violence and war. Resources now devoted to the preparation and conduct of war—amounting to over \$1 trillion annually—will be badly needed in the new tasks and should be diverted to the new challenges.

A new ethic is required—a new attitude towards discharging our responsibility for caring for ourselves and for the earth. We must recognize the earth's limited capacity to provide for us. We must recognize its fragility. We must no longer allow it to be ravaged. This ethic must motivate a great movement, convincing reluctant leaders and reluctant governments and reluctant peoples themselves to effect the needed changes.

The scientists issuing this warning hope that our message will reach and affect people everywhere. We need the help of many.

**We require the help of the world community of scientists—natural, social, economic, political;**

**We require the help of the world's business and industrial leaders;**

**We require the help of the world's religious leaders; and**

**We require the help of the world's peoples.**

**We call on all to join us in this task.**

# SELECTED SIGNERS OF THE WARNING

In 1992, the Union of Concerned Scientists sent the World Scientists' Warning for endorsement to all scientists worldwide who had been awarded the Nobel Prize, and to national academy-level scientists in Africa, Canada, China, Europe, India, Japan, Latin America, Russia, the United Kingdom, and the United States.

Over 1700 scientists, including 104 Nobel laureates—a majority of the living recipients of the Prize in the sciences—signed the Warning. These men and women represent 71 countries, including all of the 19 largest economic powers, all of the 12 most populous nations, 12 countries in Africa, 14 in Asia, 19 in Europe, and 12 in Latin America. Below is a list of some of the scientists who signed the Warning.

Anatole Abragam, France  
Carlos Aguirre, Bolivia  
Bruce Alberts, USA  
Walter Alvarez, USA  
Viqar Uddin Ammad, Pakistan  
Claude Allegre, France  
Michael Alpers, Papua New Guinea  
Anne Anastasi, USA  
\*Philip Anderson, USA  
\*Christian Anfinsen, USA  
How Ghee Ang, Singapore  
\*Werner Arber, Switzerland  
Mary Ellen Avery, USA  
\*Julius Axelrod, USA  
Michael Atiyah, Great Britain  
Howard Bachrach, USA  
John Backus, USA  
Achmad Baiquni, Indonesia  
\*David Baltimore, USA  
H. A. Barker, USA  
Francisco J. Barrantes, Argentina  
David Bates, Ireland  
Alan Battersby, Great Britain  
\*Georg Bednorz, Switzerland  
\*Baruj Benacerraf, USA  
Germot Bergold, Venezuela  
\*Sune Bergstrom, Sweden  
Daniel Bes, Argentina  
\*Hans Bethe, USA  
Arthur Birch, Australia  
\*Michael Bishop, USA  
\*Konrad Bloch, USA  
\*Nicholaas Bloembergen, USA  
David Mervyn Blow, Great Britain

\*Baruch Blumberg, USA  
Bert Bolin, Sweden  
\*Norman Borlaug, USA  
Frederick Bormann, USA  
Raoul Bott, USA  
Ronald Breslow, USA  
Ricardo Bressani, Guatemala  
Hermann Brück, Great Britain  
Gerardo Budowski, Costa Rica  
E. Margaret Burbidge, USA  
Robert Burris, USA  
Glenn Burton, USA  
\*Adolf Butenandt, Germany  
Sergio Cabrera, Chile  
Paulo C. Campos, Philippines  
Ennio Candotti, Brazil  
Henri Cartan, France  
Carlos Chagas, Brazil  
Sivaramakrishna Chandrasekhar, India  
\*Georges Charpak, France  
Joseph Chatt, Great Britain  
Shiing-Shen Chern, China  
Christopher Chetsanga, Zimbabwe  
Morris Cohen, USA  
\*Stanley Cohen, USA  
Stanley N. Cohen, USA  
Mildred Cohn, USA  
\*E. J. Corey, USA  
\*John Cornforth, Great Britain  
Hector Croxatto, Chile  
Paul Crutzen, Germany  
Partha Dasgupta, Great Britain  
\*Jean Dausset, France  
Ogulande Robert Davidson, Sierra Leone  
Margaret Davis, USA

Luis D'Croz, Panama  
\*Gerard Debreu, USA  
\*Pierre-Gilles de Gennes, France  
\*Hans Dehmelt, USA  
\*Johann Deisenhofer, Germany  
Frederica de Laguna, USA  
Paul-Yves Denis, Canada  
Pierre Deligne, France  
Frank Dixon, USA  
Johanna Döbereiner, Brazil  
Joseph Doob, USA  
\*Renato Dulbecco, USA  
Heneri Dzinotyiweyi, Zimbabwe  
\*Manfred Eigen, Germany  
Samuel Eilenberg, USA  
Mahdi Elmandjira, Morocco  
Paul Ehrlich, USA  
Thomas Eisner, USA  
Mohammed T. El-Ashry, Egypt  
\*Gertrude Elion, USA  
Aina Elvius, Sweden  
K. O. Emery, USA  
Paul Erdos, Hungary  
\*Richard Ernst, Switzerland  
Vittorio Ersparmer, Italy  
Sandra Faber, USA  
Nina Federoff, USA  
Herman Feshbach, USA  
\*Ernst Otto Fischer, Germany  
Inga Fischer-Hjalmars, Sweden  
Michael Ellis Fisher, Great Britain  
\*Val Fitch, USA  
Dagfinn Follesdal, Norway  
\*William Fowler, USA  
Otto Frankel, Australia  
Herbert Friedman, USA  
\*Jerome Friedman, USA  
Konstantin V. Frolov, Russia  
\*Kenichi Fukui, Japan  
Madhav Gadgil, India  
Mary Gaillard, USA  
\*D. Carleton Gajdusek, USA  
Robert Gallo, USA  
Rodrigo Gamez, Costa Rica  
Antonio Garcia-Bellido, Spain  
Leopoldo Garcia-Collin, Mexico  
Percy Garnham, Great Britain  
Richard Garwin, USA  
\*Murray Gell-Mann, USA  
Georgii Georgiev, Russia  
Humam Bishara Ghassib, Jordan  
Ricardo Giacconi, USA

Eleanor J. Gibson, USA  
Marvin Goldberger, USA  
Maurice Goldhaber, USA  
\*Donald Glaser, USA  
\*Sheldon Glashow, USA  
James Gowans, France  
Roger Green, New Zealand  
Peter Greenwood, Great Britain  
Edward Goldberg, USA  
Coluthur Gopalan, India  
Stephen Jay Gould, USA  
\*Roger Guillemin, USA  
Herbert Gutowsky, USA  
Erwin Hahn, USA  
Gonzalo Halfpeter, Mexico  
Kerstin Hall, Sweden  
Mohammed Ahmed Hamdan, Jordan  
Adnan Hamoui, Kuwait  
A. M. Harun-Ar Rashid, Bangladesh  
Mohammed H. A. Hassan, Sudan  
Ahmed Hassanli, Tanzania  
\*Herbert Hauptman, USA  
Stephen Hawking, Great Britain  
Elizabeth Hay, USA  
\*Dudley Herschbach, USA  
\*Gerhard Herzberg, Canada  
\*Antony Hewish, Great Britain

## About the Union of Concerned Scientists

The Union of Concerned Scientists (UCS) is dedicated to advancing responsible public policies in areas where science and technology play a critical role. Established in 1969, UCS has created a unique alliance between many of the United States' leading scientists and thousands of committed citizens. This partnership addresses the most serious environmental and security threats facing humanity.

UCS is currently working to encourage responsible stewardship of the global environment and life-sustaining resources; promote energy technologies that are renewable, safe, and cost effective; reform transportation policy; promote sustainable agriculture; and curtail weapons proliferation. An independent nonprofit organization, UCS conducts technical studies and public education, and seeks to influence government policy at the local, state, federal, and international levels.

For information about UCS and our work, visit the UCS site on the World Wide Web at <http://www.ucsusa.org>. Or you may call us at 617-547-5552 or send us an e-mail at [ucs@ucsusa.org](mailto:ucs@ucsusa.org).
